IS YOUR CAR PARK winter ready?

Car parks present many hazards to pedestrians and drivers, particularly during the winter months when severe weather conditions create additional safety risks. Even stepping out of a car can be hazardous if snow or other debris is blocking a walkway to an entrance, or there is ice on the car park or walkways. Common car park hazards include wet leaves, fallen twigs and branches, excessive amounts of rainwater, slippery ice or deep snow.

Here are some simple steps you can take to ensure your outdoor areas remain safe, whatever the weather:

- Monitor the weather and temperature and make sure the car park and pathways are gritted before the onset of frost, and before ice or snow settles.
- Organise for fallen leaves, twigs and branches to be removed at regular intervals.
- Discourage employees to take shortcuts over grassed areas as exposed mud will become slippery.
- Use anti-slip mats in entrance halls and inside all external doors to reduce the risk of slips and falls.
- Ensure that lighting outdoors is sufficient for the darker days during the winter months.
- Display signs indicating that slower speeds are needed on the site when the weather is poor.
- Calming traffic speed is a simple way to reduce one of the dangers that can cause the most damage.
- Take steps to reduce the risk of flooding in your car park.
- Maintain paths and car park surfaces to make sure there are no potholes or other types of damage that could cause harm to pedestrians or vehicles.
- Prioritise areas that provide essential access for employees and visitors, such as communal areas and external pathways and entrances to car parks.
- Ensure signs are noticeable and easy to understand: keep them clean and remember to light them if they need to be seen when it's dark.
